Resinoid Engineering Materials Summer Shutdown Notice

The week of July 4, 2010 Resinoid Engineering's Material Division Facility in Skokie, IL will be conducting its annual summer maintenance shutdown. We are giving you this notice so Resinoid can coordinate our production and shipping schedules in order to meet all of our customers' needs without interruption. Resinoid will not be able to produce any material during this week as all our lines will be down for our annual maintenance needs.

Thus, Resinoid Engineering's Material Division will be shutdown from July 5, 2010 and will reopen on July 12, 2010. Please make note of this when you determine your phenolic molding compound needs during this time as this week off will add an additional week to our normal two to three week leadtime.

If you have any questions, please call us at (847) 673-1050 and we would be more than happy to assist you. We will be here during the week if you find you need any technical assistance or would like to place an order for delivery after our summer shutdown.

Thank you for your continued business and we look forward to continuing to meet your phenolic molding compound needs for the rest of 2010.
