January 28, 2020

Updated Statement on Resinoid Engineering Corporation's phenolic materials compliance with REACH (ECHA_01_2020).

North American customers of Resinoid Engineering's phenolic molding compounds do not have a requirement to take any action in regards to the EU REACH regulation (EC) no. 1907/2006 given that they mold the materials via a traditional molding method (typically referred to as compression, transfer or injection molding) without modifications to the composition of the molding compound per or post molding nor are shipping the unmolded material to the EU.

The parts molded out of Resinoid Engineering's phenolic molding compounds do not contain a "Substance of Very High Concern" above a threshold of 0.1% and do not have an "intended release" of a substance from them. Thus, a North American molder of Resinoid phenolic molding compounds would have no obligation under the REACH regulation for parts shipped to the EU.

If you have any further questions or need further clarification, please contact our Materials Division in Skokie, IL USA at (847) 673-1050.
